Steward every dollar. Prove every outcome.

Mr. MoneyBags is a modern, audit-ready fund accounting platform that gives boards, executives, and finance teams real-time insight and stewardship over restricted and designated funds. Designed for multimillion-dollar philanthropic foundations and large churches, it delivers GAAP/FASB 958 alignment, airtight donor restriction tracking, and board-ready reporting—without the bloat or consulting overhead.

## Who We Serve

- Philanthropic Foundations: track grants, programs, and restricted gifts; report outcomes with confidence.
- Mega Churches: steward designated funds (building, missions, benevolence) transparently across campuses and ministries.

## Problems We Solve

- Donor restrictions and grant lifecycles are hard to enforce in legacy systems.
- Spreadsheet sprawl slows audits and board reporting.
- Limited visibility into fund health, burn rate, and program impact.

## The Mr. MoneyBags Solution

- True fund accounting: entity, GL, fund, and restriction dimensions built-in.
- Real-time dashboards: balances, burn rate, and budget vs. actual by fund/program.
- Audit-ready journal flows: approvals, posting, and immutable audit trails.

## Outcomes

- 100% visibility into restricted/designated funds and compliance status.
- Faster board reporting (hours → minutes).
- Clean audits with traceable support down to each entry line.

## Product Highlights

- FASB 958 alignment; posted vs. unposted JE control.
- Granular role-based permissions; multi-entity support and consolidation.
- Bulk imports (accounts, vendors, payments), CSV templates, and validations.
- Powerful search and segmentation by entity, fund, and restriction.
- Export to Excel/CSV; scheduled reports; PDF board packets.

## Security & Compliance

- Least-privilege roles and activity/audit logs.
- Encryption in transit; PostgreSQL backbone; backup and retention policies.
- Segregation of duties with approvals and posting gates.

## Implementation & Migration

- 2–6 weeks typical; white-glove onboarding.
- Structured data migration from legacy systems/spreadsheets.
- Parallel-run support and training for finance teams.

## Pricing & ROI

- Tiered by entities/users; predictable annual pricing.
- 3–6 month payback from audit savings, faster reporting, and reduced spreadsheet risk.

## Call to Action

Book a 45-minute demo to receive a tailored migration plan and TCO analysis.
